Brief description of the company

Our company specializes in the development and operation of large enterprise information systems for industry. We implement solutions of various types such as business, warehouses, purchases, transport, maintenance, quality assurance, finance, investments, accounting, HR, archiving, security and many other areas. We have developed hundreds of systems and applications. We create interfaces for technological devices and also build applications for mobile computers for production, warehouses, transport or for protection.

We have one of the longest histories of Java development in Slovakia, and we have literally grown with it during that time. Today, we have a widely complex Java infrastructure that has undergone several radical generational changes and offers extensive programming APIs, an elegant GUI control model from the server, an integration and communication platform with service creation tools, a server

balancing and release deployment system, a Java client for desktops and Mac, mobile clients for Android and iOS, Web client, Document Management System, packages for reusable solutions and much more good and useful features for our developers. We manage projects, development and operation in accordance with international standards IPMA, PMI, PRINCE, ITIL, ITSM 20000, DevOps.

We provide complex operation of information systems.
